## Description Detailed

Full-automatic Compound potato chips production line which absorbing European and American technology and our company take many years to develop and research this line independently. The equipment using potato starch as raw material, through mixing, pressing, forming, frying and flavoring and finally you can produce high-grade delicious compound potato chips.

The potato chips equipment use 304 stainless steel material and electronic parts is imported Siemens ,thus the line can have long and stable running .this machine with high automation and the price is much cheaper than the European machine .but the quality is near to the European level .the flavor of the potato chips can be different .so the market of the potato chips is huge and can get a
